

GHIDINI LIGHTS UP EUROLUCE 24TH EDITION

The latest products and innovation from Ghidini Illuminazione at Rho Exhibition Center from April 18th to April 23rd

Brescia, March 21 2007 – Ghidini Illuminazione couldn't miss EuroLuce, a prestigious biennial fair showing the latest news in technical electrical and electronic lighting industry, which will take place at the new stunning Fiera Milano exhibition center in Rho from April 18th to April 23rd. A great international event dedicated to architects, interior decorators, and lighting designers.

Ghidini will display its high quality and enhanced products at **G12 Booth, Pavilion 24**. At Ghidini booth, visitors will be able to enjoy the new products: **Tatto, Profilo, Carrera, Polverso** and be introduced to the new **Spittler** brand, a German company offering a complete range of technical lightning products for retailing, offices and public administration, exclusively distributed by Ghidini Illuminazione for the Italian Market.

Tatto is the in-ground recessed lighting fixture in die-cast aluminium. Its round shape makes it ideal for illuminating monuments, walls or tall trees in high profile public areas. Its special characteristics include two different asymmetrical optic systems to choose from: wall washer for greater visual comfort and asymmetric spot for more precise illumination. Its reduced depth (just 130 mm) makes it easy to install. Also available with an "all glass" finish or with a stainless steel A4 ring, with a thickness of 2mm.

At Rho Exhibition Center **Profilo** will be also displayed, it is the new linear spotlight for walls. Thanks to the adjustable support brackets this fixture can easily be positioned by adapting the beam of light to the wall itself. The spotlight is available in two lengths (615mm. and 910 mm.), in both the version with the 12W or 18W florescent T5 bulb, or in the LED version with the RGB accessory.

At EuroLuce 2007 Ghidini will also show the Carrera line and the bollards

Polverso.

Carrera consists of a complete line of drive-over in-ground fixtures, available in symmetrical or asymmetrical reflectors. Finishings of all Carrera products are in a barely visible aluminium frame, to reduce at least the contrast between the lamp and the floor. Carrera is also available with stainless steel trim, complete of iron rough-in housing with cataphoresis treatment. Coloured glass filter for an impressive lighting effect available on request. (suggested drainage area: 300mm).

Polverso bollards are made up of extruded aluminium. Its main distinctive features are a high oxidation resistance and a diffuser in transparent tempered shock-resistant glass. Polverso bollards are ideal for lighting paths like green areas. The 18W fluorescent version complies with the most strict regulations on lighting pollution.

GHIDINI ILLUMINAZIONE is a historic brand in the field of outdoor lighting fixtures. The company, which originated in the town of Lumezzane (Brescia) in 1978, is independently managed by the founding family. Specialised in the production of outdoor lighting solutions, their products are characterized by a meticulous attention to detail and design. Ghidini's wide and flexible range of products, manufactured in compliance with industry regulations, are characterized by an excellent quality/price ratio. What's more, Ghidini's products are backed by a high level of customer service. Their main lines of lighting products include recessed and wall lights, bollards, urban poles, spotlights and urban furnitures solutions. Ghidini has been granted *both the UNI EN ISO 9002 and UNI EN Iso 14001 Certifications*. For further information please visit: **www.ghidini.it**.
