

## A SHINING SUCCESS FOR GHIDINI AT LIVINLUCE

*Next trade show appearance scheduled for EuroLuce in April*

**Brescia, 16<sup>th</sup> February 2007** – Ghidini Illuminazione was a shining success at LivinLuce (Rho-Milano, 6-10 February). All of the Ghidini lines were showcased at the company's understated yet elegant stand, including recently released products: Tatto, Profilo, Carrera and the new Polverso bollard lights, in addition to the participation of Ghidini's new German partner Spittler.

"The results from our participation at LivinLuce are particularly positive", comments Roberto Castellotti, Ghidini's Commercial Director. "A success due to a great number of contacts who are certain to contribute to our business growth in both Italy and abroad".

Ghidini's core business is the design and realization of high quality products that are more and more avant-garde and technologically advanced, a vision that is evidenced in their new **Tatto**, **Profilo**, and **Carrera** lines, the **Polverso** bollard lights, in addition to the new **Spittler** brand. This German company offers a complete range of internal lighting solutions for commercial areas, offices, and public institutions which are distributed in Italy exclusively by Ghidini Illuminazione.

The ideal solution for illuminating monuments, gardens or squares is **Tatto**: the recessed in-ground lighting fixture in die-cast aluminium. Tatto lights have a circular shape and numerous special characteristics, including two different asymmetrical optics to choose from: the wall washer for greater visual comfort and spot for more precise illumination. Its reduced depth (just 130 mm) makes it easy to install.

Also available with an "all glass" finish featuring a stainless steel A4 frame, with a width of 2mm.

**Profilo** is the latest linear spotlight for walls or overhead lighting. Thanks to the adjustable support brackets this fixture can easily be positioned by adapting the beam of light to the wall. Profilo is available in two lengths (615 mm. and 910 mm.), in both version with the 12W or 18W florescent T5 bulb, or in the LED version with the RGB accessory.

Two other exciting products from Ghidini were also on display at LivinLuce: **Carrera** and the **Polverso** bollard lights.

**Carrera** is a line of recessed lights that can be installed both in interior floors and in outdoor pathways, driveways or similar applications. Finished with an imperceptible aluminium frame, level to the floor, or in stainless steel with rough-in housing in iron with a cataphoresis treatment. Coloured glass filters for creating special lighting effects available upon request.

(Recommended drainage area: 300 mm).

**Polverso** bollards are made in extruded aluminium with a die-cast aluminium body. These lights are characterised by their exceptional resistance to rust and a transparent diffuser in tempered glass that is highly impact-resistant. Poverso bollard lights are ideal for illuminating walkways in garden areas. The 18W version is 100% compliant with regulations governing the control of light pollution.

At LivinLuce, the undisputed star at the Ghidini stand was Spittler, a German company who has come together with Ghidini for an exclusive distribution partnership in Italy. Technical lighting solutions for interior and large areas such as hospitals and airports. Ideal for offices but also for decorating homes such as lofts, with a modern touch and industrial design. What's more, Spittler offers clients something extra: the design and manufacture of special made-to-order products.

**GHIDINI ILLUMINAZIONE** is an historic brand in the field of exterior illumination, with a consolidated expertise in aluminium processing technologies and the manufacture of lighting solutions. The company, which originated in the town of Lumezzane (Brescia) in 1978, is independently managed by the founding family. Specialised in the production of outdoor lighting solutions, their products are characterized by a meticulous attention to detail and design with a primary focus in the best possible results in terms of the light yield and enhancement of outdoor areas. Their main lines of lighting products include recessed and appliqué lights, bollards, light posts, spotlights and urban lighting solutions. Ghidini has been granted both the UNI EN ISO 9002 and UNI EN Iso 14001 Certifications.
